## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 26-42 are rejected under 35 U.S.C. 102(e) as being anticipated by Jordan et al., US Patent 6,650,190.

Regarding claim 26, Jordan et al. discloses a voltage-controlled oscillator (Fig 2) and a method, comprising:

a plurality of series-coupled voltage control delay lines (120) for outputting a plurality of oscillating signals according to a voltage control signal (130), wherein each of the VCDL has a delay time corresponding to the voltage control signal (130);

a multiplexer (150), coupled to the VCDL, for selecting one of the oscillating signals (110) to be an output oscillating clock according to a control signal (160);

a detector (not shown but necessarily present by teachings in column 2, lines 46-48), coupled to the multiplexer (150), for outputting a detecting signal according to the output oscillating clock and a predetermined frequency (column

2, lines 46-54)(this configuration is necessarily present to maintain and provide consistent frequency adjustment while in a locked state, see column 3, lines 55-Column 4, lines 26); and

Page 3

a controller (the external macro delay control logic, column 3, line 64), coupled between the multiplexer (150) and the detector (not shown), for determining the control signal according to the detecting signal;

wherein the multiplexer, the detector and the controller are formed as a close loop for determining the output oscillating clock from one of the oscillating signals (not shown but necessarily present in the "external loop", column 3, lines 55-67).

Regarding claims 27-29, 32-35, the functional limitations recited in the claims are inherently present in the structure of circuitry of Jordan et al. because the structure is the same as the one in this application.

Regarding claims 30 and 31, as for the components in PLL as recited in claims are rejected based on the intended use.

Regarding Claims 36-42, these method claims are the same in scope as apparatus claims, which would necessarily perform the method claimed and therefore, the claims are rejected.

## Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Chang whose telephone number is 571 272-1759. The examiner can normally be reached on Mon-Fri 0700-1730.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on (571) 272-1769. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
